Objective of the event:

1. Origin, Internal and surface structures of the earth.
2. Identification of the mineral's types of clay minerals their properties and effects on engineering project.
3. Types of rock (Igneous, Sedimentary, and Metamorphic), Civil engineering importance of rock forming minerals.
4. Sedimentary processes (Weathering, erosion, deposition), Metamorphism and volcanic eruptions. Geological structures (Joint, veins, crack, faults, and fold), reasons of formation for each type and their side effects on the engineering projects.
5. Types of Dams and Tunnels.

Outcome of the Event:

1. Explain the importance of geology and compare the geological features with engineering importance.
2. Apply knowledge regarding the underline rock formation to get complete idea about igneous, sedimentary and metamorphic rock.
3. Explain about fault, folds, unconformity and joints which are present in the strata of the earth crust, by which they can able to compare the particular area with their construction site or engineering projects.
4. Explain the characteristic and impact of the naturally occurring disasters and they would be able to evaluate and create the precaution related to civil engineering.
5. Explain the importance of ground water regarding the civil engineering point of view and they would be able to create a planning for ground water for the future purpose.
